Release Notes - InSight Perform 2.2

NEW FEATURES

- **Help portal**
  You will now have access to a help portal containing instruction videos, for both users and admin.
- **Add links to processes and documents**
  You can now much more easily add a link to a process or controlled document from our new link selector feature. You can use it with any shape in the drawing tool.
- **Add rich text dialog to a shape**
  In the drawing tool you can now add a dialog to a shape where you can show rich text and links to processes, documents, and tools.
- **Breadcrumb and process structure panel**
  You can show use our new breadcrumb and process structure panel to help users find their way around the management system easier.
- **Fast Track for metadata**
  Approvers and Administrators can now change a document's metadata without the need for creating a new workspace.
- **Manage System administrators**
  It is now possible to change System administrators directly from the Administration Centre and instance settings panel.
- **Delete processes from the process overview**
  You can now delete processes from the Administration Centre. It is only deleting a process that has no child processes.
- **Restore archived documents from the administration portal**
  Administrators can now restore and bring back documents that have previously been archived.

IMPROVEMENTS

- Processes can now have the exact same name if they have different parents
- Improved validation of characters used in file names to match those that Office and SharePoint permit
- Authors that also are Approvers on the same process can now directly approve a draft document in a workspace.
- Added icons to context menu for controlled documents
- You can now close any panel by clicking outside of the panel

- It is now possible to use Zoom shortcut (CTRL + mouse scroll) for large process charts
- Use the new Eraser in the drawing tool to quickly remove many shapes
- In the drawing tool it is now possible to choose if a link should open in a new browser tab or open in the existing browser window.
- If a term does not exist when publishing or creating a new version, the system will now remove that term automatically.
- The service account that controls permissions on perform can now use MFA.
- The creator of a new instance is automatically added as Application Administrator. Also, when adding new Application Administrators, they will now be added to all processes automatically.
- Provisioning of columns is now done in both English and Swedish automatically
