BaseDrum Communicate 1.9.0.0

NEW FEATURES AND IMPROVEMENTS

NEW WEBPARTS

People

- A customizable slider to highlight people, it can for example be used to display information about specific people in focus or new hires.
- Choose between adding slides manually, or fetching information from a group or a list.
- Has support for videos.

Puffs

- Colorful and customizable cards to display small amounts of information.
- They support images and links in a modern format.
- Can be used to create prettier internal/external links than what is included in Sharepoint by default.

Birthdays

- Displays upcoming and current birthdays within the tenant.
- Automatically fetches birthday information from Delve/AD from users who have chosen to share their birthday.
- Includes options to customize the look.

KPI Counter

- Display numeric counters with eye catching animations from a choosable data source, either manually or a Sharepoint list.
- Can be used to display monthly sales numbers, how many new customers have signed up, etc.

NEW FEATURES IN EXISTING WEBPARTS

TV-App

- Added new slide type: Countdown, for displaying a countdown until a specific date and time. When the timer expires confetti rains down (which is optional).
- Added another new slide type: Facebook, for displaying a company's Facebook feed.
- Big improvements to the look and readability of News slides. They now keep more of their original layout (with images, etc.), and if they are too long we now automatically scroll the

news text to show all of it, instead of truncating. Additionally if an image has a focus point selected, we now use this to place banner images correctly.
- Better controls for looping videos, adds the ability to loop videos infinitely, etc.
- Ability to pause and skip slides in the slideshow, this is useful for previewing slides during editing

Mega menu

- Added the ability for users to change their selected display language in Sharepoint directly from the Mega menu via the new flag icon.
  NOTE: this is an optional feature that requires administrator approval for the delegated User.ReadWrite Microsoft Graph API permission. If not enabled, the flag is simply not visible.
- Added support for displaying where the user is inside the Mega menu. This is done by highlighting the top-level option we're currently "under" and displaying an arrow next to the specific link. This feature is configurable on the instance level inside Tahoe Administration.

RSS

- Added support for displaying images from an RSS-feed, for example the headline image of a news feed
- Added support for automatically fetching information about the RSS feed, for example setting the title, description and a logo if the RSS feed has this information
- Both above features are fully configurable

Handbook

- Added ability to add an icon to each handbook category for easier visual categorization
- Added localization support – handbook categories can now be translated into the different languages present on a site, and pages in the handbook will have their titles displayed with the correct translation if one exists

My Links/Tools

- Visual redesign and upgrade – the grid and compact display modes have recieved a new, more rounded and colorful look.
- Added support for custom icons: previously we were limited to the FontAwesome icon set, it is now possible to upload your own images and use them as icons.
- The HelpLink field has been improved: You can now add information and a link, and it will be displayed as a tooltip when you click the info icon attached to the tool.

General/All

- Upgraded all web parts and packages to the latest version of Sharepoint Framework, 1.16.1

BUG FIXES

Slider

- Fixed support for audience targeting on all slide types

General/All

- Many minor fixes
