Release Note – InSight Improve 3.0.0.0

NEW FEATURES

- ### Chat function
  Users involved in or previously engaged with a case can @-mention each other in a case.
  Each chat thread will be saved with the related item in the SharePoint list.
- ### Case list
  A new Case list has been developed. It supports views that you already have and additionally includes:
  - Support for fullwidth section.
  - A context menu with that enables users to:
    - Open case
    - Follow / Unfollow case.
    - Message the active owner.
  - Filter panels for all column types
  - Sort cases based on columns.
  - A new webpart settings panel where administrators can select the list and view to show.
- ### Tahoe Administration
  - Administrators can now create new instances and multiple flows from templates.
  - Administrators can now add new flows onto existing instances, choosing from the eight templates.
  - Instances are now grouped based on the sites they reside on.
  - Administrators can archive flows.
  - Administrators can now edit
    - Button settings for each flow such as name, background color, icon and audience.
    - Phase names within a flow.
  - Administrators can now edit the content of a phase, for example:
    - Change fields properties.
    - Change in which order the fields are presented.
    - Add existing fields.
    - Create new fields.
  - Administrators can now edit fields that are shown in the information panel, for example:
    - Change fields properties.
    - Change in which order the fields are presented.
    - Add existing fields.
    - Create new fields.
  - Administrators can now edit the following properties for existing fields:
    - Display name.
    - Hidden
    - Required
    - Choices

- In existing, and new flows, administrators can now create new fields from the following types:
  - Text
  - Multiline Text
  - Date
  - Choice
  - User
  - Taxonomy (InSight Improve)

IMPROVEMENTS

- Carousel for viewing attached images
  Images will now be opened in a separate window where you can scroll through them easily.
- Attachments
  Will now show a thumbnail of either the image or the filetype.
- Drag and drop in Attachments
  Users can now drag and drop files into attachments.
- Information panel is now sticky
  The information panel will now always be shown in the top right of the screen when scrolling.
- Entirely new API running .NET 8
- Webpart settings
  Some settings are no longer necessary for the webpart to work. We instead fetch the settings needed based on which instance the user is in.
- Optimizations for faster loading times
  The InSight Improve webparts now load faster and the fetching of data is overall more efficient.

FIXED

- Field in the info box showing up empty with a pen icon in some cases.
- Work items from other instances showing in My Improve.
- Visual bugs like attachments not being aligned when registering a case.
